Adjusting the Door

Depth adjustment of door with SALICE mounting plates.

It is possible to adjust the door up to +2.8 mm. The slot on the metal bottom plate allows the hinge to slide. Afterwards the screw must be re-tightened.

Height adjustment of door with SALICE cruciform mounting plates with slot.

Height adjustment of door of ± 2 mm is possible by loosening the two fixing screws. The slots allow the mounting plates to slide in both directions. Afterwards the screws must be re-tightened.

Lateral adjustment of door with SALICE concealed hinges.

The adjusting screw produces the lateral travel of the hinge arm from -1.5 mm up to +4.5 mm. This value is reduced to -0.5 mm when using profile door hinges and mini hinges. The door moves with respect to the furniture side without coming apart. There are no further correcting actions required.
