

# BREMICK®

# COLLATED PLASTERBOARD SCREWS

Bremick is a long term supplier to the **Residential, Commercial & Trade sectors** for over 50 years. Collated screws, like all Bremick products, are **fully warranted quality** products. In turn providing peace of mind for the end user.

Bremick collated screws are specifically designed for all collated tools on the market; no matter the brand.

## Collated Range

Each box has **1,000 screws**, which is made up of 20 strips with 50 screws per strip. The collated screw strips are held together through a soft malleable plastic, which makes it easier to feed into the collated gun & prevents the strip from jamming.

Typically, plasterboard screws are **6G in diameter**, ranging in lengths of **25mm, 32mm or 41mm**. Designed for a variety of board thicknesses to be used in different applications.

Plasterboard sheeting used in domestic applications are generally 10mm thick with the **25mm collated screw** as the most popular size.

## Bremick – Your Quality Supplier

Bremick products are used in more critical applications than those of any other fastener supplier in Australia. People's lives depend on the quality of our products. All Bremick products are subjected to **extensive compliance testing** at our manufacturing plants and at the Bremick Test and Inspection Laboratory in Sydney ensuring strict compliance with both **Australian and International Standards**.

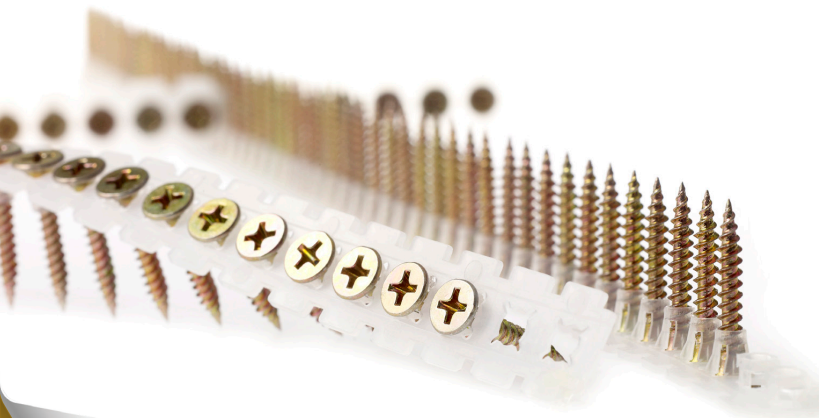

## Packaging & Labels

The collated labels are designed for easy selection, providing all the traditional information including **size, quantity & thread type**.

Thread type is an important element of the screw, which is differentiated through colour – green signifies fine thread whilst yellow signifies coarse thread.

Stickers can be found in two locations per box; front and side.

**Flip for more information on  
screws & installation**

# COARSE OR FINE THREAD?

## COARSE FOR FIXING PLASTERBOARD TO TIMBER

All the screws have a bugle head design with a needle point drill tip and phillips drive, specifically designed for the plasterboard applications.

Available sizes:

**6 x 25mm** Coarse thread zinc yellow

**6 x 32mm** Coarse thread zinc yellow

**6 x 41mm** Coarse thread zinc yellow

## HOW TO FIX PLASTERBOARD TO ANY MATERIAL

- STEP 1** Set collated screw gun to match the length of screw selected
- STEP 2** Feed the strip into the collated gun, ensuring it slides between the guides
- STEP 3** Click the collated strip into position
- STEP 4** Adjust the guide on the tool to ensure the screws finish just below the surface without ripping the paper
- STEP 5** Try the screws in a off cut to make sure the depth is correct

## FINE FOR FIXING PLASTERBOARD TO THIN METAL

Bremick's fine thread collated screws have a unique "**Twin Start Thread**" which means faster installation every time.

Available sizes:

**6 x 25mm** Fine thread zinc yellow

**6 x 32mm** Fine thread zinc yellow

**6 x 41mm** Fine thread zinc yellow

## SAFETY EQUIPMENT AND PROTOCOLS

All customers are advised to always wear appropriate **personal protective equipment (PPE)**. We recommend safety glasses at a minimum for all applications.

For further clarification on which screws to use & what safety protocols to follow, please refer to the plasterboard manufacturers' recommendations, found on their corresponding website.

If you have any questions or inquiries, please contact your local representative.
