NON Methylene Chloride Paint Stripper!

Diggers Paint Stripper Domestic Formulation is a **non methylene chloride** alternative that deeply penetrates and quickly lifts paint for easy removal. Its **domestic strength** formulation gets straight to business, quickly penetrating and softening multiple layers in as little as 30 minutes and **staying wet up to 24 hours** allowing you to complete a whole project in one application.

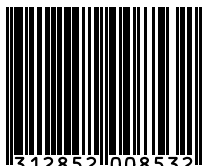

Where to Use...

Diggers Paint Stripper removes oil and water based paints, acrylics, varnishes and epoxies from timber, metal and masonry surfaces and is suitable for residential, commercial, automotive and marine applications. No masking smells are added making its **low odour** formulation ideal for indoor use.

How To Use...

Simply apply a thick coat with a brush or roller and allow it to penetrate and soften the paint for approximately 30 minutes. Using a paint scraper or steel wool, agitate treated surface before paint re-hardens. Unlike Methylene Chloride based paint strippers, Diggers Paint Stripper Domestic Formulation will not make the paint blister but will gently soften the paint so that it can be scraped off. Should any paint remain, simply apply a second coat. Completing the process, Diggers Paint Stripper has special additives that allow residue to be **rinsed easily with water from brushes and equipment**. Alternatively, use Methylated Spirits if there is any danger of raising or swelling of timber. Allow surfaces to dry thoroughly before redecorating.
